AE WOOD DETERGENT

Everyday cleaning can include using a vacuum cleaner with the head brushes out or sweeping with a brush. Spot clean food spills and dirt with a damp not soaking cloth.

Regular cleaner:- Element 7 AE Detergent – is a light cleaning fluid recommended to be used once a month, but no more than a maximum of once a week. Shake thoroughly and mix 2 capfuls of detergent per 1 litre of warm water. Using 2 buckets and a cotton headed flat mop, soak the cotton head in the mixed solution (bucket 1) and wring out the excess water. After every pass with the mop, rinse out the dirty head in warm water (bucket 2) before soaking it once again in the mixed solution, do not rinse. Let the floor dry and buff with a white pad for an even finish if required or a wool pad for a shinier finish.

ALSO USEFUL:

Dane Care Premium Break-Frame Mop:- assemble the mop using the cotton flat mop head, frame and handle. Projects with larger flooring areas or multiple finishes will be more easier to undertake if you have several Mop Heads. These can then be prepared in advance and machine washed before the next cleaning process. You can also purchase the Dane Care Premium Breakframe Bucket and Wringer, which further simplifies the process.
